Dear Sir:

In response to the Office Action mailed June 27, 2002 and as part of a Request for Continued Examination filed herewith, please amend the above-identified patent application as follows:

In the claims:

Please amend the following claims:

4. (Amended Thrice) A method of surgery comprising [the steps of removing a vertebral disc from a patient's spine, forming holes at precisely predetermined locations in bone structure adjacent the location of the removed disc, tapping the holes to form a female thread in each hole, and threadably implanting an anchor into each tapped hole, thereby creating reference points located precisely with respect to the patient's spine,];

forming concave, non cylindrical surfaces in the endplates of confronting vertebral bodies [adjacent spinal bone], and

inserting between the formed concave [bone] surfaces an intervertebral [a vertebral] disc endoprosthesis including:

confronting [concave-convex] supports, each support having an exterior convex surface adapted to mate with one of the formed concave surfaces [the adjacent formed concave spinal bone surface, the endoprosthesis further including], and
